The relationship between SUSE and Microsoft is not new (in fact, both companies entered into a partner agreement with Microsoft in 2006 to help our customers in developing comprehensive environments for Linux. This is one of the many areas where we collaborate.

The 2006 agreement was unique among Linux distributions with Microsoft.

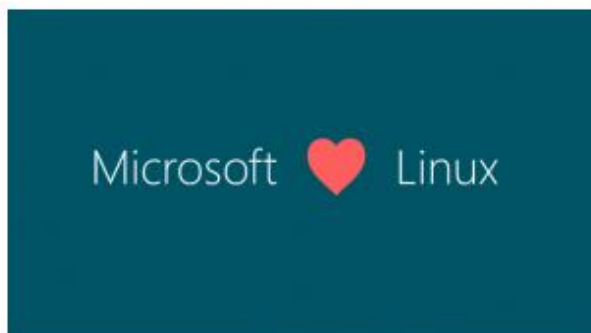

Microsoft SQL Server Success

SQL Server is the most deployed database in the world and the most vulnerable database platform for the last nine years.

One of the reasons for SQL Server's continued success is its engine but also focusing on the primary goal of enterprise customers.

For that, Microsoft is innovating inside and outside the box. In this portion when we get to the topic of Big Data Clusters.

Bringing that success to Linux

As you may know, since September 2016 and we've been working on bringing that success to Linux.

Since then, we've been sure we have a great SQL Server on Linux.
